

How *F.A.S.* Works

Human-in-the-loop compliance that intercepts biased rejections before they bind.

THE WORKFLOW

1

ATS Generates Rejection Decision

The algorithmic system scores, ranks, or filters a candidate and triggers a rejection. This happens in milliseconds.

■ The decision is made — but not yet sent.

2

F.A.S. Intercepts at the Boundary

The rejection decision hits the F.A.S. API before reaching the candidate. The system pauses delivery and initiates forensic review.

■ **Interception point: between ATS decision and candidate notification.**

3

7-Lane Forensic Audit Runs Automatically

Every intercepted rejection is scanned across 7 compliance lanes: age proxies, gap penalties, disparate impact, credential inflation, keyword mismatch, disability exclusion, and legal framework triggers.

■ **Audit completes in under 2 seconds.**

4

Human Reviewer Receives Flagged Decision

If any lane triggers a flag, the decision routes to a human reviewer with full context: the candidate profile, the JD, the algorithmic score, and the specific compliance risk.

■ **Reviewer can override, modify, or confirm the rejection.**

5

Decision Finalizes — With Audit Trail

The human-reviewed decision is logged with timestamp, reviewer identity, override rationale, and compliance status. The candidate receives the final determination.

■ **Every decision is now defensible.**

The 3-Second Window

F.A.S. creates a mandatory pause between algorithmic decision and candidate notification. This is not a delay — it is the compliance boundary where human judgment intervenes before algorithmic bias binds.

3 SECONDS · HUMAN REVIEW · AUDIT TRAIL

The 7 Forensic Lanes

1 Age Proxy Signals Age	2 Employment Gap Penalties Gap	3 Disparate Impact Patterns Impact	4 Credential Inflation Credential
5 Keyword Mismatch Keyword	6 Disability Exclusion Disability	7 Legal Framework Triggers Legal	✓ Full Coverage SB205 · LL144 · EU AI Act

The Defensibility Output

■ Decision Log Timestamped record of every rejection, review, and override with reviewer identity.	■ Compliance Report Annual bias audit documentation mapped to SB205, LL144, and EU AI Act requirements.	■ ■ Court-Ready Evidence Forensic audit trail with chain of custody for regulatory defense and litigation.
